com. All Rights Reserved.[Study on decoction pieces of phytoma used in Chinese medicine]. To explore the quality of decoction pieces of phytoma used in Chinese medicine in Jiangsu Province. Phytoma were collected from Xiangshan Park, Changshu and Qiantang during the period of 1993-1995. Samples were identified by morphology, determination of Chinese medicine fingerprint and H1N1 influenza A virus antibody. A total of 4 kinds of phytoma were identified, of which 2 were wild phytoma and 2 were cultivated phytoma. In the study of Chinese medicine fingerprints, phytoma of Xiangshan Park and Changshu were the same, with the main ingredient platycodonis radix and the main effective component Platycodonis radix is distant in chemical structure. But they were different from those of Qiantang. The contents of platycodonis radix, platycodonis radix is distant and platycodonis radix succotrans. In the study of H1N1 influenza A virus antibody, samples of Xiangshan Park and Changshu were positive, samples of Qiantang were negative, but those of Xishuangbanna were negative. Phytoma are different in geographical distribution, morphology and component composition. It should be found in the source of phytoma in the production of traditional Chinese medicine.1. Field of the Invention The invention relates to a device for high pressure heating of the interior of a body having at least one pressure-tight cover sealing the body. 2. Description of the Related Art Such devices are particularly suitable for heating the interiors of hollow-cylindrical containers of the kind used for the heat-treatment of beverage containers, for example, filled with beer or other beverages. A device of this kind is known from EP 0 471 637 B1. There, the body consists of a housing and a lid joined together by means of a hinge. The lid is provided with a hydraulic clamp which is fixed to the housing and can be moved up and down hydraulically. In the lowered position, the lid, therefore, seals the interior of the body and makes it possible to pressurize the interior. The body is connected to a container which is located inside the housing, and the hydraulic clamp is fastened to the container. Thus, the interior of the body can be pressurized from the interior of the container. When the 82157476af
