Anticancer activity and mechanism of action of photodynamic therapy with 5-aminolevulinic acid in HOS cells. In this study, we investigated the effect of photodynamic therapy with 5-aminolevulinic acid (5-ALA) on HOS cells and identified the underlying mechanism. 5-ALA-induced photodynamic

therapy decreased cell viability in HOS cells with a 50% inhibitory concentration of 20 $\mu\text{g}/\text{mL}$. The flow cytometry analysis showed that 5-ALA-mediated photodynamic therapy induced apoptotic cell death. Treatment with 20 $\mu\text{g}/\text{mL}$ 5-ALA resulted in significant DNA damage in HOS cells as demonstrated by comet assay.

Treatment with 5-ALA-induced photodynamic therapy resulted in marked caspase-3 activation in HOS cells. Treatment with 5-ALA-induced photodynamic therapy produced a significant increase in intracellular reactive oxygen species level and decreased mitochondrial membrane potential. The data indicated that 5-ALA-

induced photodynamic therapy potently inhibited HOS cell proliferation and induced apoptosis in a concentration- and time-dependent manner. Q: How to reduce the data and keep the accuracy I am working on opencv which is performing at recognition accuracy, but it is very less for the data. How can I reduce the data and keep the accuracy.

Also the accuracy is very less, but getting near to it. Is there any technique to enhance my accuracy? A: Reducing the size of your dataset is a high-reward strategy for achieving good accuracy, but before you do that you want to make sure you are identifying the features that are important to your problem, rather than just throwing more data at the

problem. Remember that the more times you run your recognition model on the same data, the better you should be able to achieve, and the more accurate your model should become. I would start by thinking about the type of recognition you are doing. Are you trying to do image classification? If so, you might want to examine the OpenCV

library's image classification methods. Or are you trying to perform a part of speech tagging? In that case, you might want to consider looking at the language tools available in the OpenCV library. Or, perhaps you want to perform a feature matching or object tracking? You might want to evaluate the performance of your

feature matching algorithms and perform tracking on a small set of objects you recognize as being of interest. If
